

THE SCENARIOS

Pearl Harbour

Japanese political and military values in 1941 were different from those in the West. To forewarn an enemy was an act of stupidity — not courtesy. The declaration of war upon the **US**, intended to be presented just one hour prior to the Pearl Harbour strike, was made in nominal conformity to the Geneva Convention. That its delivery was delayed is history and one can only speculate how much effect, if any, an early warning would have had in thwarting the carefully planned Japanese attack. Certainly, as events were to transpire, the **US Pacific Fleet** was caught absolutely unprepared for action. Not since Nelson's destruction of the French squadron at Aboukir Bay had a major world power suffered such an abject defeat. The losses were formidable; seven battleships, three cruisers, five destroyers and numerous auxiliary craft out of action in addition to almost 200 planes destroyed on the ground. Japanese casualties were some 29 aircraft. Yet the naval base itself was virtually intact — the vital fuel storage tanks, machine shops and dry-docks were untouched as were nine new fleet submarines. The carriers, of course, were fortunately at sea and unable to intercept the superior Japanese force. As the course of the war would show, the significant elements of ocean warfare had not been harmed. Japan had simply stirred up more trouble than she could ever hope to handle.

Coral Sea

The stunning successes of the Japanese Striking Forces (and especially of their naval aviators) in just four months had secured all of the original objectives deemed necessary for the creation of a defensible outer perimeter. A kind of 'victory disease' began to manifest itself and the hitherto careful and realistic Japanese military planning lost sight of its earlier principles. The hastily conceived expedition to capture Port Moresby on the southern coast of New Guinea was mounted without the vital protection afforded by a land-based air umbrella. It also reduced the potential striking power of Yamamoto's main Carrier Force, at this time preparing for their climactic battle with the **US Pacific Fleet**. Takagi's Carrier Strike Force raced south from Truk to intercept any Allied attempt to interfere with Abe's Transport Force as it slowly worked its way through the Louisiade Archipelago and into the Jomard Passage. **US** cryptanalysts had cracked the Japanese naval code and, forewarned of the **IJN**'s intentions, Nimitz despatched two fleet carriers to thwart the impending invasion. In a confused melee lasting two days, **US** naval aircraft sank the light carrier **Shoho** and severely damaged the **Shokaku**.

The cost was high. The Queen of the Flat Tops, the **Lexington**, was sunk along with the oiler **Neosho** and the destroyer **Sims**. However, Port Moresby was saved and Yamamoto had lost the use of his two modern flat tops.

Midway

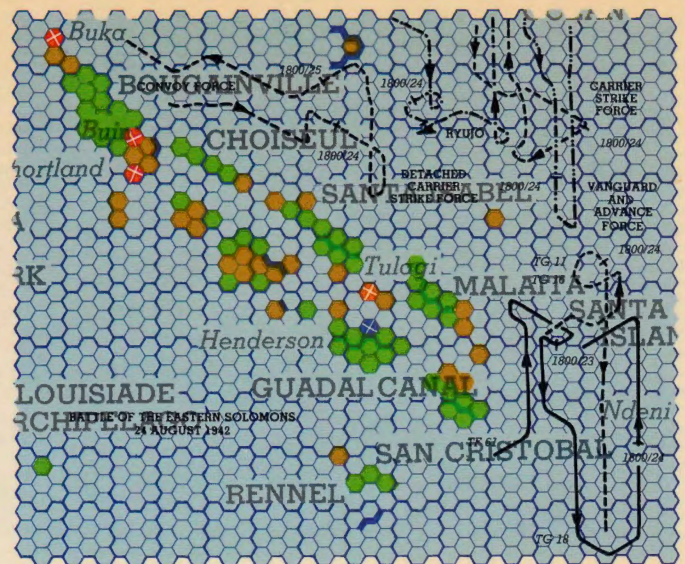

Fully aware of his country's inability to compete with the awesome **US** economy, Yamamoto was desperate to force a decisive battle — success in which, he argued, would provide the only means of preventing the inevitable defeat of his homeland. To this end, a mighty fleet of almost 100 warships including four fleet carriers was to descend upon the isolated atoll of Midway some 1000 nautical miles WNW of the Hawaiian Islands. The **US Pacific Fleet** would have to respond and, in the ensuing battle, would be annihilated. It was not to be. Sloppy planning, over-confidence, poor intelligence, dispersal of forces and just plain bad luck would combine with a forewarned **US Navy** to inflict a crushing defeat on the hapless Japanese. The four fleet carriers, **Akagi**, **Kaga**, **Hiryu** and **Soryu** were sunk as well as the heavy cruiser **Mikuma**, two destroyers and a transport. The **Yorktown**, fatally damaged by the small strike launched from the doomed **Hiryu**, was finished off three days later by a submarine. The Japanese striking arm was broken and, though it would be another year before the arrival of the **Essex** Class carriers would give the **US Navy** a decisive carrier superiority, the Japanese losses at Midway curtailed their further expansion and guaranteed their eventual defeat.

THE SCENARIOS

Eastern Solomons

By the middle of August 1942, the **US** airbase at Henderson Field on Guadalcanal was operational. Marine VF and VB units dominated the waters around the Allied toehold in the Solomons during daylight hours, effectively preventing more than a trickle of Japanese from reinforcing the out-numbered, ill-equipped force surrounding the American encampment. The Imperial General Headquarters determined the recapture of Guadalcanal and the destruction of its garrison to be imperative. An ambitious and, as usual, overly complex plan was developed whereby not only would Guadalcanal be reinforced with crack troops but also Milne Bay on the eastern tip of New Guinea would be wrested from the Australian garrison there. Fifty-eight warships including three carriers with 177 aircraft enveloped the Eastern Solomons to contend for supremacy with Fletcher's TF 61 — a force of 30 warships and 259 aircraft. It was another confused engagement, over before either side had obtained a clear picture of the other's intentions. The Japanese lost the light carrier **Ryujo** while the **Enterprise** suffered substantial damage. More significantly, the transport convoy was turned back, ending any hope for a quick build-up and successful assault. To complete the disaster, the Milne Bay invasion force was repulsed and forced to evacuate after three days hard fighting.

Santa Cruz

So serious had the situation on Guadalcanal become that on September 18th, Imperial General Headquarters directed a full division to reinforce the defeated Ikki and Kawaguchi detachments. Both sides were suffering fearfully from disease as much as combat attrition and coupled with the extreme difficulty each faced in getting reinforcements successfully ashore, another major naval battle was becoming inevitable. From mid October, Japanese battleships and heavy cruisers were committed to the nightly bombardment of Henderson Field and this, coupled with a determined assault from upwards of 20,000 experienced troops almost succeeded in driving the resolute marines from their defensive positions. Frustrated by the army's failure to neutralize Henderson Field, Yamamoto signalled his fleet south again to eliminate the **US** carriers and isolate Guadalcanal from its source of supply at New Caledonia. The **Hornet** was sunk and the **Enterprise** damaged in exchange for moderate damage suffered by the **Zuiho**. It was the best result the Japanese had achieved in a carrier battle. Yet strangely, Yamamoto failed to press his advantage and withdrew. Guadalcanal remained operational and the ever-expanding marine air force would soon gain such superiority over the area around the vital island that no Japanese force could further molest it.

Philippine Sea

Almost two years had elapsed since last the Imperial General Headquarters had contested **US** advances with carriers. This was to be the 'decisive battle', fought with the support of a vast concentration of land-based planes. On paper, the Japanese forces appeared daunting. Upwards of 500 land-based planes were deployed between Okinawa and Truk in addition to the 450 aircraft carried in the nine flat tops assembled at Tawi-Tawi. These numbers were misleading. Few Japanese carrier air-crews had had any combat experience and many had not even completed proper training programmes. Land-based crews were no better. They had lost none of their courage but without the skill of their predecessors, the generally flimsy Japanese airframes would stand no chance against the experienced, well-trained **US** air-crews. Furthermore, **US** radar and fire control systems linked with the huge numbers of AA guns now carried by all ships would make penetration, even for experienced airmen, all but impossible. On June 15th, Allied forces went ashore on Saipan with the protection of TF 58's 15 carriers. **US** strikes virtually destroyed the land-based component of Ozawa's plan and the subsequent failure of the carrier pilots was a foregone conclusion. Only the extra range of Ozawa's planes saved his carriers from destruction — and even so, both **Taiho** and **Shokaku** fell victim to **US** submarines.
